

Questions for Your Plumber

About the Plumber:

1. Are you bonded and insured?
2. How much will the water meter installation cost?
3. How long will installation take and how long will my water be shut off?
4. Are you familiar with what I am planning to do, and have you done similar projects for others? (sub-meter for tenants, sewer deduct meter, etc.)
5. Do you offer a warranty on your work?
6. Do you have any references that I could contact?
7. Are you familiar with **Flows.com**, their extensive offering of water meters, and the spectacular support they provide? (we sure would appreciate the mention! 😊)

About the Water Meter:

Where is the best location to install the meter(s) for the intended use?|

Considerations for water meter location include:

- Ease of Installation and reading.
- The size of the pipe must be matched!
- Is the pipe vertical, horizontal, or somewhere in-between?
- Is the location indoors, outdoors, or in an outdoor pit?

What unit of measure should my water meter use?

Match what is on your water bills

Do I need a check valve?

Are they required by our municipality

Should I install isolation valves before and after the meter?

What will my flow rate be?

Can you measure it with a bucket test or using an external (ultrasonic) meter?

Are you aware of any local laws or certifications involved when selecting and/or using a water sub-meter?

When you are ready to pick your meter...
